- Barrier Balaclava
- Wind proof membrane on neck
- Micro fleece cape for maximum wicking fabric

- Merino Wool Minus 33 Balaclava
- Barrier wind proof membrane on neck
- Micro Fleece cape for maximum wicking fabric

# Merino Wool

Layer Properly  
Minus  
33

Merino has numerous natural attributes that make it one of the most comfortable of fabrics to wear. Its superfine fibers feel like silk next to the skin. It also has the ability to respond to changes in temperature, keeping one warm when it is cold or absorbing moisture and releasing it as you exert yourself.

## Features

### Breathability

In extreme exertion, you need a garment that absorbs perspiration and release it into the air. No fabric does that quite like Merino. The hydrophilic core of the Merino fiber has an amazing capacity to absorb liquid - up to 35% of its own weight - so it's better than synthetics at removing sweat from the skin, moving it away, and releasing it as vapor.

### Moisture Absorption

Merino wool wicks moisture away from the skin 30% faster than comparable synthetic fabrics.

### Quick Drying

It was thought that synthetics dry at a faster rate than Merino, however the latest technology enables Merino wool to be as quick-drying.

### Odor Reducing

Merino wool absorbs moisture which reduces the amount of sweat left on the body, therefore reducing the amount of odor produced from the body. It is naturally anti-microbial and anti-bacterial.

### Machine Washable

Recent innovations mean Merino garments are no longer hand-wash only. Developments initiated by Australian Wool Innovation have delivered Merino garments that can be machine-washed and tumble dried.

### Softness

Prickly wool clothing is a thing of the past. Merino is much finer than other types of wool and feels luxuriously gentle against your skin.

### Durable

Merino fibers can be bent 20,000 times without breaking which explains why merino garments are so long-lasting.

### Elasticity

The natural elasticity of the Merino fiber means they stretch with the wearer, but then return to their natural shape so there is less chance of garments sagging or losing their shape.

### Anti-Static

Merino is much less likely to cling to ones body due to its moisture absorption qualities.
