

NAMURA PISTON KITS

PISTON KITS - Piston kits come with the piston individually wrapped; a set of OEM quality rings packed in their own box, a wrist pin, and circlips. These kits are direct replacements for OEM piston with no modifications or dimensional adjustments needed. Combine this with the MOS2 coating and hard anodizing.

TOP END REPAIR KITS - These include everything you need to get you operational again; they come with pistons, a top end gasket kit and bearings where needed.

MACHINED SMOOTH HEADS

A machined smooth piston crown should reflect combustion heat while reducing carbon buildup and protecting the top of the piston. Tests have shown that a machined smooth head can increase horsepower and fuel economy by up to 6%.

MOS2 (TEFLON-MOLYBDENUM COATING)

MOS2 is composed of sub-micron sized particles of solid lubricant and resin blends of solvents. This coating is rolled to provide 10 d for adtimes the bond strength of spray coatings. This draws heat through piston walls and out the bottom. Heat and friction is reduced power and longevity.

Helps eliminate cold seizures, and increases durability

HARD ANODIZED CROWNS

Pistons that are not anodized have a hardness of HRB 60, and pistons that are anodized have a hardness of HRB 105. This makes Namura pistons 75% stronger than non-anodized pistons. This increases heat resistance, minimizes piston expansion and contraction, and reduces the coefficient of friction.

HYPEREUTECTIC CAST

A Hypereutectic cast piston is a piston with increased silicone content, resulting in a piston that has an increased hardness that is more resistant to wear, and has an increased ability to withstand higher cylinder temperatures, pressures, and detonation. Helps reduce expansion from heat and makes the piston durable and resistant to wear and allows the piston to run tighter clearances.

Piston kits come with the piston individually wrapped; a set of OEM quality rings, wrist pins and circlips.

These are direct replacements for OEM pistons with no modifications or dimensional adjustments needed.
