

RK DRIVE CHAIN

ON ROAD CHAINS

RK ZXW Premium High Performance - XW Seals

ZXW Series Chains are the strongest, longest-lasting premium quality XW-Ring equipped chain available on the market today! ZXW is ideal for high-speed, high-horsepower performance applications.

RK GXW Series Chains - XW Seals

RK's GXW series chains are the top of the line extreme performance chains. XW-ring chains are the BEST high-speed, extreme heat performance chains available today. GXW chains provide up to 10 times longer wearlife compared to standard chains.

RK XSO Series Chains - RX Seals

Affordable, long lasting performance RX sealed chain. XSO series offer less torsional friction and increased performance. XSO chains provide up to 7 times longer wearlife compared to standard chains.

RK SO Series Chains - O Seals

RK's traditional round "O" ring chain is a convenient blend of performance and affordability. 520SO chains are suitable for low to mid-range CC motorcycles that came from the factory with sealed chains.

OFF ROAD CHAINS

RK MXZ4 Heavy Duty MX Race Chain

MXZ4 is one of the lightest motocross chains available on the market today. Made for the professional motocross racer, MXZ4 is the next generation of motocross racing chains featuring Chromoly steel construction and seamless rollers and bushings.

RK MXU Sealed MX Chain

Combines both longevity and performance. MXU is one of the lightest sealed-ring motocross chains available on the market today. MXU features Ultra-thin UW-Seals perfect for bikes with case clearance issues.

RK EXW Sealed ATV/Off-Road Chain

EXW is specifically designed for ATV/Off-Road vehicles and is the best high-speed, extreme heat, off-road performance chain available. EXW chains feature XW-Ring seals to better survive the abrasive conditions that exist in hostile off-road conditions.

RK MALAYSIA

RKM Heavy-Duty Chain

Heavy Duty, non-sealed motorcycle chain for small CC motorcycles that did not come from the factory with a sealed chain. When choosing RKM chains, please make sure the chain you choose has a suitable CC rating for the CC's of your motorcycle.

RKM Standard Chain

Economically priced, non-sealed motorcycle chain for small CC motorcycles that did not come from the factory with a sealed chain. When choosing RKM chains, please make sure the chain you choose has a suitable CC rating for the CC's of your motorcycle.

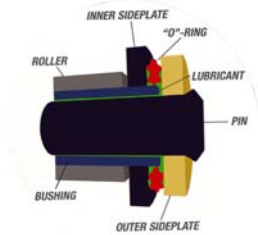

RK DRIVE CHAIN

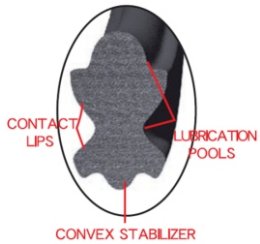

Non "O" Ring vs Basic O'Ring

- A properly lubricated, Heavy Duty racing non-O'Ring chain will perform efficiently as long as there is a "lubricating oil boundary layer" between critical bearing surfaces. However, once the boundary layer dissipates from high speed running, lack of maintenance, or simply over time, the inner bearing surfaces will overheat, kink, cause severe drag, and ultimately fail. RK O'Ring chains prevent this from happening by continuously lubricating and protecting critical internal bearing surfaces.
- The standard RK O'Ring has a flat contact patch that holds the lubrication in place. The result is a smooth transfer of power - quietly, safely and efficiently - with absolutely no O'Ring drag, plus the benefit of three times the wear life of a standard non O'Ring chain.

REMEMBER: If your motorcycle came from the factory with an O'Ring chain, it should always be replaced with an O'Ring chain.

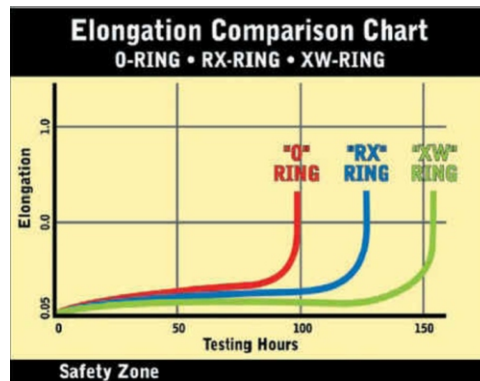

RX" - Ring Design and Features

- RK's "RX-ring" chains feature an X-ring shaped seal. Viewed in cross-section, the "X-ring" has two lubrication pools and seal points versus the single seal point/pool design of a regular o-ring chain. "RX-ring" technology offers less torsional friction, increased high-stress performance, and a 30% longer wear life compared to standard o-ring chains. RK's new "RX-ring" chains offer tremendous value, plus true quality and performance for all but the most demanding high performance applications.

"XW"-Ring Design and Features

- The leading edge "XW"-Ring is the ultimate high speed, extreme heat performance chain. The XW-Ring is made of an advanced Nitrile Butadiene composite and is equipped with three contact lips and two convex outer stabilizers. This means three lubrication pools to protect against high speed abrasion, extreme heat build up, torsional flex and the loss of lubricant under these extreme conditions. The Nitrile Butadiene composite is oil and contaminant resistant, and the "XW" design is compression and distortion resistant to provide the ultimate in efficiency and performance. The XW-Ring goes the distance to fully eliminate the risk of seal failure and provides the user with a 50% longer wear life than the basic O'Ring chain; plus a 20% increase over other competitive "X"-Ring type chains.

RK recommends using a chain model with the maximum amount of displacement and horsepower ratings based on motorcycle's original equipped chain size.
 * = LBS/100 Links
 ** = LBS/FT
 ***= Need a wider amount of space than the maximum chain width in order to install the chain.
