An excellent option for passengers and tall riders.

- High density foam covered in special cold weather vinyl.
- Can be adapted to use with most back rests.
- Recommended for passengers under 125 lbs.

SNO-SKINZ CUSTOM TAILORED SLED COVERS

Sno Skinz Covers - Sno-Skinz has custom tailored each and every cover to fit specific makes and models of snowmobile. In most cases Sno-Skinz covers fit better than factory covers. This is important because one of the primary reasons that covers wear out is wind vibration while the machine is being towed on a trailer. Loose fitting covers flap like flags on a windy day and quickly damage themselves. The better a cover fits, the less wind vibration. Many after-market covers are manufactured as "Universal fit" or "Generic S, M, & L". This style of cover will never match the look and performance of a custom fit cover!

Sno Skinz covers are made from a Super VI Polyester Plus that is resistant to abrasion, stretching, the elements of nature and tensile strength. Super VI Polyester is approximately five times more durable than cotton duck. Another benefit of Super VI Polyester Plus is its color fastness and resistance to fading. The cotton used by most cover manufacturers, including the factories, has a UV rating of only 35-H. Typical nylon, although a durable material, only has a UV rating of about 40 to 55-H. Super VI Polyester Plus has a superior UV rating of 225-H! This doesn't mean that its fade proof, but it does mean that it will hold its color and look great for more than six times longer than other covers. You don't have to worry about washing or shrinkage either. It can be power washed or even tossed into a home washing machine using a mild detergent.

There are specific points on a snowmobile that are sharp and abrasive such as suspension components, body panels, running board edges and handlebar hooks that typically cause rips and tears fairly early in a covers life. Sno-Skinz is the only cover that is reinforced in these areas with Dura-panels. These exclusive panels contribute greatly to the durability of Sno-Skinz covers.

All of Sno-Skinz covers utilize front-to-rear floating strap systems with side tension straps made of 1" HD polypropylene web which stays more flexible in cold weather and plastic-coated steel J-hooks. This is an important difference because of the added tension that this type of strap allows you to put on the fit of the cover. Sno-Skinz binds the front and rear edges with HD 1" polypropylene webbing, which not only finishes off these edges but also reinforces these seams. All Sno-Skinz covers utilize coil type 8mm HD zippers at the gas access flap with YKK® cam self-locking pulls and pull cords.

Sno-Skinz builds its covers to last, so we 100% guarantee satisfaction on delivery and guarantee against structural failure in materials and workmanship for as long as you own your snowmobile.

See following Page for applications

Econo Cover Features Include:

\$169.95-H

- One colour (black)
- Made from Super VI Polyester Plus (Provides colour fastness)
- HD Polypro webbing for easy cold weather operation with HD steel hardware
- Trailerable

Deluxe Cover Features Include (in addition to the Econo Features above)
