

SLIDE RAIL EXTENSIONS

Longtrack your sled

- Includes two rail extensions and all necessary hardware to attach them.
- Most applications raise the rear wheel approx. 1/4" for improved turning.
- Allows, longer more aggressive tracks for improved deep snow performance.
- Double offset design eliminates changes to axle spacers and shims.

* ** Please Note that the 8" Idler wheel is not sold with the Extension

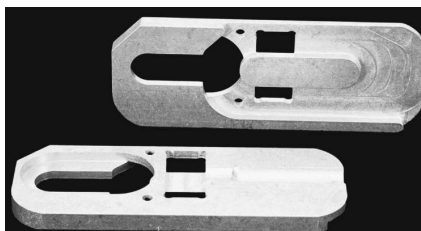

* **WARRANTY:** These extensions have been tested and proven to be a practical way to extend slide rail length. When installed on heavier models, jumping can cause the slide rails to bend. (Note: The manufacturer will warranty defects in materials and workmanship of the extensions only.)

PART NUMBERS WITH A "M" AT THE END EXTENDS THE PLASTIC SLIDER

How to Calculate Required Extension

Determine both the old track length and the new track length (Track pitch multiplied with number of pitches). Then subtract the old track length from the new track length. The Difference is your track extension.

8" Wheel Relocation Kit

757-1142

\$129.95-F

Run 8" Wheels and Keep your stock track length

Arctic Cat 151-156"

- These relocation kits utilize your current rails to relocate up and forward for a perfect fit, to allow for our bigger 8" billet aluminum wheels. Very user friendly, comes complete with visual instructions
- Minor modifications to the stock rails are required to at relocation brackets.
- Will keep machine to stock track lengths
- True 8" Hardware (8" Billet Wheels sold separately)
- Made with quality & durability you can see and feel!

Offset Axles

Kit allows you to run 2 bigger wheels on the inside of your slide rails.

You can change from 6 3/8" to 7.25" wheels or from 7.25" to 8" wheels, without any modification to your rails, slip in to stock rails with out cutting or welding.

Track Adjuster Kit

757-1180

\$ 18.95-J

Kits includes necessary parts to convert Arctic Cat Kit to fit Yamaha applications.

A/C Suspension Upgrade Kit 755-5003

\$139.95-F

Coupling of the suspension eliminates the rear kick-back effect experienced by riders on washboard and stutter bump trails.

Controls ski lift to maintain track contact with the ground resulting in improved acceleration and handling.

Reduces inside ski lift when cornering.

Fits the following models with 121" tracks:

- 600 DLX, EFI, EXT (98)
- Cougar DLX (98)
- T-Cat (98-01)
- ZRT (97-01)
- ZR (97-01)
- ZL (98-01)
- Z440 (98-99)

Power Crank Steering Arm

\$153.20-F

The bellcrank is the heart of the steering and front suspension systems. If you want better handling, easier steering, stronger construction, lighter weight, less maintenance, and a striking appearance...this is a "Must Have" product. It has no equal! The Power Crank eliminates the normal steering play by the use of greasable premium needle roller & ball roller bearings. By reducing friction & increasing the length of the arm on the bell crank, the mechanical advantage is enhanced, thereby lessening the effort required for steering. Powder coating is standard on all models of the Power Crank.
